Gentlemen:

In response to your verbal request, we are pleased to submit our fixed price quotation for one (1) unit of the above equipment, complete except for the Dynazoom microscope.

The unit shown on the above drawing utilizes the basic frame assembly from a standard Model GFL-940MC Light Table, modified to permit installation of the special cross carriage and light source for the Dynazoom microscope. Two separate light sources will be provided with one 5:1 ratio dimming control to provide diffuse "cold" light at each side of the microscope area. The clear plate glass top spans the microscope viewing area. Two nylon brushes pivoted from the carriage frame provide for flattening the film in the viewing area. The table is equipped with our regular type T-2-5 dual reel brackets, and solid end rollers with plastic jackets to protect the film from scratching.

The microscope carriage is provided with "Y" travel only on a ball-bearing carriage with adjustable drag. Connected to the carriage is a c-frame support for the special light source required in conjunction with the microscope. The microscope stand is a modified Dynazoom stand to satisfy the fine focus requirements. Film clearance of at least 3/8" will be provided under the carriage.
